Unimplemented tests

Two testing scenarios were left out of testing. First test left out of the testing is "Confirming order (18)". This test was impossible to implement due to technical difficulties with Chrome driver. After filling the required information and confirming address, a chrome pop up to save the address showed and it is impossible to close, because it comes from the browser and Selenium cannot interact with it. No setting in the driver setup helped either. Second left out test is "Updating product availability (24)"due to technical issues.
